Learning Objective : 01-03 What factors affect the two primary OB outcomes?

Topic : 01-06 Building a Conceptual Argument

75) All of the following statements about the resource-based view of organizations are accurate, except?

- A) It describes what exactly makes resources valuable.
- B) It describes what makes resources capable of creating long-term profits for the firm.
- C) A firm's resources include financial and physical resources.
- D) A firm's resources include resources related to organizational behaviour.
- E) It suggests that the value of resources depend on a single factor.

SECTION BREAK. Answer all the part questions.

102) As a student, you have been attending the local university majoring in business. You have signed up for this course on organizational behaviour. You are also working as an assistant manager at a local restaurant where Ben Barrack is the manager. When Ben finds that you are enrolled in an OB course, he laughs and says OB is common sense, you don't need a course on it and that if you take strategic management, it gives you the same information. Ben comments that the only thing he needs to worry about is the job performance of his employees. Having just studied this chapter, respond to the following questions and Ben's comments and beliefs.

Question Details

102.1) Which of the following two concepts represent relational mechanisms that have a direct impact on job performance?

- A) Stress and motivation
- B) Personality and ability
- C) Organizational structure
- D) Leadership styles and behaviours
- E) Organizational culture and organizational structure

91) A

92) E

93) C

94) D

95) OB is a field of study devoted to understanding, explaining, and ultimately improving the attitudes and behaviours of individuals and groups in organizations. HRM, on the other hand, takes the theories and principles studied in OB and explores the "nuts-and-bolts" applications of those principles in organizations.

96) See Figure 1-1 in the text.

97) The key individual outcomes in studies of organizational behaviour are job performance and organizational commitment. The factors that affect these outcomes are individual mechanisms (job satisfaction; stress; motivation; trust, justice & ethics; and learning & decision making). Individual mechanisms, in turn, are driven by organizational mechanisms (organizational culture and structure), group mechanisms (leadership: styles & behaviours, and power & influence; and teams: processes and characteristics), and individual characteristics (personality & cultural values and ability).

98) People are rare and inimitable. The inimitability of people can be described using the following three reasons: history, numerous small decisions, and socially complex resources. Student answers will vary for the last part of the question.

Organizational Behaviour 5ce Edition by Colquitt Ch01

99) Philosophers have argued that there are several different ways of knowing things: • *Method of experience*. People hold firmly to some belief because it is consistent with their own experience and observations.

- *Method of intuition*. People hold firmly to some belief because it "just stands to reason"—it seems obvious or self-evident.

- *Method of authority*. People hold firmly to some belief because some respected official, agency, or source has said it is so.

- *Method of science*. People accept some belief because scientific studies have tended to replicate that result using a series of samples, settings, and methods.

Organizational Behaviour 5ce Edition by Colquitt Ch01

100) Theory, hypothesis, data, and verification.

The method begins with **theory**, defined as a collection of assertions—both verbal and symbolic—that specify how and why variables are related, and the conditions in which they should (and should not) be related. More simply, a theory tells a story and supplies the familiar who, what, where, when, and why elements found in any newspaper or magazine article.

The scientific method requires that theories be used to inspire **hypotheses**. Hypotheses are written predictions that specify relationships between variables. For example, a theory of social recognition might be used to inspire this hypothesis: "Social recognition behaviours on the part of managers will be positively related to the job performance and organizational commitment of their units." This hypothesis states, in black and white, the expected relationship between social recognition and unit performance.

You then would collect data, and compare its results against the hypotheses, and verify its confirmation of the hypotheses. If confirmed, then the hypothesis is upheld. If the data do not confirm the hypotheses, then revisions to the theory occur to generate new/further hypotheses to be tested.

Organizational Behaviour 5ce Edition by Colquitt Ch01

101) A correlation, abbreviated r , describes the statistical relationship between two variables. Correlations can be positive or negative and range from 0 (no statistical relationship) to 1 (a perfect statistical relationship). In organizational behaviour research a correlation of .50 is considered "strong," given the sheer number of things that can affect how employees feel and act. A .30 correlation is considered "moderate," and many studies discussed in this book will have results in this range. Finally, a .10 correlation is considered "weak." It should be noted, however, that even "weak" correlations can be important if they predict costly behaviours such as theft or ethical violations. The .08 correlation between smoking and lung cancer within 25 years is a good example of how important small correlations can be.

"Correlation does not imply causation." It turns out that making **acausal inference**— establishing that one variable really does cause another—requires establishing three things: first, that the two variables are correlated; second, that the presumed cause precedes the presumed effect in time; third, that no alternative explanation exists for the correlation. The third criterion is often fulfilled in experiments, in which researchers have more control over the setting of the study.
